<b>Description</b>			
<b>Got this email, please figure out what to do so SSL continues to work.</b>			
Cron <root@localhost> python -c 'import random; import time; time.sleep(random.random() * 3600)' && /usr/local/bin/certbot-auto renew			
Your system is not supported by certbot-auto anymore. Certbot will no longer receive updates. Please visit <a href="https://certbot.eff.org/">https://certbot.eff.org/</a> to check for other alternatives. /opt/eff.org/certbot/venv/local/lib/python2.7/site-packages/cryptography/hazmat/primitives/constant_time.py:26: CryptographyDeprecationWarning: Support for your Python version is deprecated. The next version of cryptography will remove support. Please upgrade to a release (2.7.7+) that supports hmac.compare_digest as soon as possible. utils.PersistentlyDeprecated2018, Saving debug log to /var/log/letsencrypt/letsencrypt.log			
----- Processing /etc/letsencrypt/renewal/hostings.com.conf ----- Cert not yet due for renewal  ----- The following certs are not due for renewal yet: /etc/letsencrypt/live/hostings.com/fullchain.pem expires on 2021-03-15 (skipped) No renewals were attempted. -----			

### History

#### #1 - 01/05/2021 08:39 AM - Thom Ho

Hi Kevin, could you please check if we can upgrade the current ubuntu 14.04 to 18.04 or latest version on hostings.com server?  
It seems using old version cause this issue.

#### #2 - 01/05/2021 09:43 AM - Kevin Zaleski

### 1) If you must move hostings be sure to move all databases.

The task database(s) are unrelated to Hostings but I use them everyday.  
See this app at <https://hostings.com/tasks/task.php?a=n>

### 2) Please keep a log of the steps you take to setup the new site so I can document the process in the Hostings Admin Guide.

It doesn't need to be detailed, but enough info so any decent developer could recreate the process, if needed.  
For example, "copy databases" is enough for that step.

### 3) cronjobs

I am not certain that the file of cronjobs under git accurately reflects the current cronjobs that are running.  
Please compare and update git if needed.  
Tell me what file under git contains the cronjobs so I can document it.

## 4) aliases

Make sure that /etc/aliases gets ported.

If they are not stored under git please add them to some file under git.

Tell me what file under git contains the aliases so I can document it.

## 5) password protection

.htaccess files must be ported to retain directory protection

For example, <https://hostings.com/hm/admin.php>

## 6) Hostings and CG use each other for database backups.

This must continue to work. After migration, trigger the backups and confirm that they work.

**6a) While you are in there making sure these backups work, make automated backup of the redmine database work (also go to hostings) and send me a copy of the redmine backup.**

Use the same rolling 14 days of backups as already in place.

**6b) Also setup automated remote backups of the task database from the HM server to the CG server.**

Send me a copy of the task database.

---  
6.1.26.4 Database backups

Revised: 2016-11.

Classy Groundcovers is backed up to the Hosting Masters server (to /home/hostings/cgBackup).

Hosting Masters is backed up to the Classy Groundcovers server (to /home/calmness/hostingsBackup).

Files are kept for 14 days and then deleted.

**#3 - 01/14/2021 12:42 AM - Kevin Zaleski**

- Due date set to 01/14/2021

**#4 - 01/15/2021 06:27 AM - Kevin Zaleski**

- Due date changed from 01/14/2021 to 03/14/2021

I see the certificate now expires March 14th, has this been fixed or just postponed?

**#5 - 01/15/2021 06:27 AM - Kevin Zaleski**

- Subject changed from (hostings.com) SSL EXPIRES 1/14/2021 - system is not supported by certbot-auto anymore to (hostings.com) SSL EXPIRES 3/14/2021 - system is not supported by certbot-auto anymore

**#6 - 03/20/2022 03:59 PM - Kevin Zaleski**

- Status changed from Assigned to Closed
